Oral Cancer: Diagnosis, Management, and Rehabilitation provides readers with a systematic review of the diagnostic and treatment principles that maximize the outcomes of patients who have been diagnosed with oral cancer. Written by authorities in the fields of head and neck surgical oncology, radiation oncology, reconstructive surgery, dentistry, and oral and maxillofacial surgery, this textbook provides clinicians with a unified management philosophy that is firmly based upon the best available evidence in the peer-reviewed literature. In-depth clinical reviews of preferred treatment approaches and reconstructive techniques for each oral mucosal site facilitate the development of effective treatment strategies that are tailored to the location and extent of the lesion. The book describes the interrelationship between the site of oral cancer involvement and its impact on outcomes, such as local-regional cancer control and quality of life following treatment.
