### Full Papers and Letters in Chemical Synthesis

SynOpen is an international Open Access journal reporting current research results in chemical synthesis in full paper and letter format. It covers all fields of scientific endeavor that involve organic synthesis, including catalysis, organometallic, medicinal, biological, and photochemistry, but also related disciplines and offers the possibility to publish scientific primary data. Full papers provide dependable research results with detailed and reliable experimental procedures and full characterization of all important new products.

### The following article types are published in SynOpen:

- ▶ **Original Papers**  
cover original research which has not been previously published, except in the form of an abstract or preliminary communication.
- ▶ **Letters**  
are preliminary reports of new research results whose significance to the scientific community justifies rapid communication.
- ▶ **PSPs (Practical Synthetic Procedures)**  
are useful and reliable procedures of interest for both academic and industrial chemists presented in a compact form.

As an Open Access publication, all articles in SynOpen are made freely available for all to read and download from [Thieme E-journals](#).

*SynOpen* requires that authors follow the ICMJE (International Committee of Medical Journal Editors) recommendations for the **Conduct, Reporting, Editing, and Publication of Scholarly work in Medical Journals**. More information can be found here: <http://www.icmje.org>
